OBJECTIVE

Backend and Systems Engineer specializing in Python, SQL, LLMs, API design, Linux environments, and distributed backend systems, building scalable, fault-tolerant, and event-driven applications for real-time data processing, trading systems support, system integration, and performance optimization in production-grade environments.

EDUCATION

B.Tech in Computer Science, Lovely Professional University
CGPA: 6.47/10

Aug 2022 - May 2026
Punjab, India

SKILLS

Programming Languages	Python, SQL, JavaScript, C++
Frameworks / Libraries	FastAPI, Django, NumPy, Pandas, OpenAI API
Databases	PostgreSQL, MySQL, SQLite
Developer Tools	Git, GitHub, Docker (basic), Linux, CI/CD pipelines, Excel (basic)
Core Concepts	System Design, Distributed Systems (basic), REST APIs, Microservices, Data Structures, OOP, LLMs, Data Pipelines, Model Deployment, Event-driven Systems
Finance	Interest in Financial Markets, Trading Systems, Data-driven Decision Systems
Certifications	Generative AI (DeepLearning.AI), Prompt Engineering (Vanderbilt)

EXPERIENCE

FlickDone | Data Engineer Intern | Remote

June 2025 - Aug 2025

- Built scalable ETL pipelines processing 50K+ records with fault-tolerant design, improving data quality by 25% through preprocessing, validation, and reliable data workflows.
- Diagnosed and resolved CI/CD pipeline failures using system logs and debugging, improving deployment reliability and reducing failure rate by 30%.
- Optimized LLM-powered backend services for production use, improving system efficiency by 40% through API tuning, latency reduction, and performance optimization.
- Enhanced PostgreSQL and MySQL performance using indexing, query optimization, and schema redesign for low-latency, high-throughput backend systems.

PROJECTS

AI Product Recommender System. Built scalable LLM-based semantic search and retrieval system using FastAPI, RAG pipelines, embeddings, and OpenAI API, enabling real-time query processing and improving response relevance while reducing API latency by 35%.

Morning Market Brief. Built asynchronous, event-driven data pipeline integrating financial and news APIs for real-time ingestion and LLM summarization, improving system responsiveness and reducing latency by 30%.

Rails TODO Application. Designed RESTful backend system using MVC architecture with optimized schema design and query optimization, improving API response performance by 20% for scalable web service operations.

EXTRACURRICULAR

- Won 1st Place at Hackfest 2025 for designing scalable backend and distributed AI systems focused on performance, reliability, and system design under strict time constraints.
- Founded CAT AI, building retrieval-augmented generation (RAG) systems for scalable knowledge retrieval, improving accuracy by 35% and reducing inference cost by 25% through optimized retrieval pipelines.
- Solved 225+ LeetCode problems demonstrating strong proficiency in Data Structures, Algorithms, system design, and problem-solving under constraints.
