

● 5-minute read · 6 pages · prompts to copy

Design a carousel with Claude, from one prompt.

Set up your brand once, paste the prompt, and let Claude draft the structure, copy flow, hierarchy, and visual direction. Then you refine.

7 slides **1 prompt** **2 passes**
per carousel to first draft to refine

The whole workflow

The blank page was never the hard part — taste is. This workflow hands the structure, copy, and hierarchy to Claude so your energy goes where it matters: refining a draft into something that looks like *you* made it. Four steps, three prompts to copy.

Give Claude your brand first.

The mistake almost everyone makes is a generic prompt. Generic in, generic out. Before you ask for anything, hand Claude your actual design system — fonts, colours, references, and the carousel structures that already work on your page.

PASTE THIS FIRST

```
Here is my brand system.  
Fonts: [your fonts]  
Colors: [your hex codes]  
Visual references: [paste or describe a few]  
Carousel structures that work on my page: [a couple of examples]  
  
Use this as my design system for everything that follows.
```

Why it matters: once Claude has your system, it stops guessing and starts behaving like an assistant who knows your brand. This one step is the difference between a template and something that looks like you made it.

The carousel prompt.

With your brand loaded, this is the prompt that returns a full first draft — structure, copy flow, hierarchy, and visual direction, all at once.

THE CAROUSEL PROMPT

Create a 7-slide carousel.

Slide 1 is the hook.

Slides 2 and 3 build the problem.

Slides 4 to 6 explain the workflow.

Slide 7 ends with a CTA.

Keep the copy tight, the hierarchy strong, and every slide on-brand.

One prompt returns all four

Structure — the 7-slide arc · **Copy flow** — what each slide says · **Hierarchy** — what the eye hits first
· **Visual direction** — how it should look.

Refine it.

The first draft is a starting point, not the finish line. Push it: a sharper hook, less text per slide, a cleaner layout, a stronger CTA. Two passes usually gets it where you want it.

THE REFINE PASS

Tighten this.

Sharper hook on slide 1.

Cut the text on every slide.

Cleaner layout, more white space.

Stronger CTA on slide 7.

What two passes do to a slide

✗ FIRST DRAFT

Eight lines of body copy, a soft headline, no clear focal point.

✓ AFTER REFINING

One sharp line, generous white space, the eye lands where you want it.

It works for landing pages too.

Same setup, different output. Ask for a full landing page and Claude drafts each section before your designer even touches it — hero, problem, offer, social proof, CTA.

THE LANDING PAGE PROMPT

Using the same brand system, design a landing page.

Sections: hero, problem, offer, social proof, CTA.

Give me the copy flow and visual direction for each section.

It doesn't replace your designers. It cuts the time and cost wasted on first drafts and hands your team a real head start. Claude gives directions. Your team brings taste.

— NOW DO THIS

Start with your next post.

The first one takes ten minutes of setup. Every one after that is faster — because Claude already knows your page.

Loaded my **brand system** into Claude once

Pasted the **carousel prompt** for a full first draft

Ran **two refine passes** — hook, text, layout, CTA

Now design your next carousel

Load your brand once, paste the carousel prompt, and run two refine passes — that's the whole workflow. Save this guide so the next post takes minutes, not hours.
