

EDUCATION

Lovely Professional University
Bachelor of Technology (Computer Science & Engineering)

Jalandhar, India
July 2022 - May 2026

SKILLS SUMMARY

- **Programming:** Python, SQL, Data Structures & Algorithms
- **Data:** Pinecone, Snowflake, Databricks, Data Pipelines
- **Analytics:** Fraud Detection, Model Evaluation
- **Tools:** FastAPI, PyTorch, Docker, AWS, APIs
- **Methodologies:** GenAI, RAG, LLMOps, CI/CD, Modern Development Practices
- **Core Skills:** Agentic Payments, Risk Intelligence, AI/ML, Data Engineering

WORK EXPERIENCE

DATA ENGINEER INTERN | [flickDONE](#) | [LINK](#)

June 25- August 25

- Built scalable machine learning data pipelines for parallel NLP text classification across fifty thousand datasets.
- Engineered Python tokenization and reconciliation workflows, reducing manual verification by seventy percent.
- Optimized cloud-based data pipeline architectures on AWS infrastructure, increasing execution speeds by twenty-five percent.
- Managed generative AI pipelines, improving risk intelligence scalability and backend platform interpretability.
- Collaborated cross-functionally to deploy conversational AI architectures, APIs, and automated agent workflows.

PROJECTS

Regulatory Compliance RAG Assistant | [LINK](#)

April 26- June 2026

- Developed Hugging Face classification workflows, boosting zero-shot fraud detection accuracy by 30%.
- Built asynchronous ChromaDB layers, improving real-time risk intelligence search and routing efficiency by fifty percent.
- Implemented Python MLOps and data pipeline workflows, cutting RAG framework latency by 50%.
- Created validation dashboards, reducing automated text analysis processing times by 40%.

AI Search & Recommendation Platform | [LINK](#)

June 25- August 2025

- Designed Python-based AI frameworks, maximizing LLM tokenization metrics for analytics dashboards.
- Implemented Databricks infrastructure using Prisma, decreasing conversational agent routing latency by thirty-five percent.
- Engineered resilient REST APIs using FastAPI for transaction workflows and automated system orchestration.
- Deployed Docker-based architectures, accelerating pipeline reliability for agentic payments by 25%.

Rails TODO App | [LINK](#)

September 24- November 2024

- Developed a full-stack Todo application using Ruby on Rails, following MVC architecture and software engineering principles.
- Implemented user authentication, session management, and authorization to provide secure access to user-specific data.
- Implemented CRUD functionalities for task management with due dates, priorities, and keywords.
- Built responsive user interfaces using Bootstrap and Bootswatch and configured the application for Heroku deployment.

Morning Market Brief | [LINK](#)

June 24- August 2024

- Built automated Python workflows, reducing conversational AI vector embedding data ingestion latency by forty-five percent.
- Applied structured validation modules, increasing LLM prompt tracking transparency for users.
- Automated OpenAI API integrations, eliminating manual workflows for complex agent automations.
- Containerized components using Docker, enabling scalable model deployment and automated AI workflows.

CERTIFICATES

Python, Data Science & ML (Cipherschools) | [CERTIFICATE](#)

August 2024

- Developed automated machine learning architectures, optimizing text classification metrics by 25% using PyTorch.
- Designed Docker testing environments, improving deep learning isolation and deployment pipelines.

Generative AI with LLMs (Coursera) | [CERTIFICATE](#)

March 2024

- Applied advanced few-shot prompt engineering to LLMs, streamlining conversational intelligence data pipelines.
- Implemented database logic, improving tracking visibility for automated retrieval-augmented generation frameworks.
